

AWARDS YEARBOOK 2014

CEDIA, the Custom Electronic Design and Installation Association, is the international trade organisation for the home technology industry with over 3,500 member companies worldwide. Built upon a strong volunteer foundation, CEDIA provides access to industry-leading education, certification, research and raises consumer awareness.

Home technology is growing in popularity, and must-haves like multi-room audio and video, home networking systems, lighting control, integrated systems and gaming spaces are more popular than ever before. Homeowners want these systems to be sleek and powerful yet easy for the whole family to use.

When you partner with a CEDIA Home Technology Professional, you tap into a knowledgeable resource that guides you on system design, product selection, execution

and service in a way that leads to a satisfied homeowner every time.

CEDIA home technology professionals know that technology is constantly changing, so they'll lay the groundwork and cabling for any future improvements in home automation.

The membership of CEDIA is exceptionally diverse, ranging from worldwide manufacturing companies to local, family-run installation businesses.

CEDIA members offer:

- **Professional assistance and guidance** in the design of a personalised system for the you and your family
- **A certified and trained team** of technicians, designers and support personnel to deliver a product of the highest quality
- **The most current technology** at all levels to provide a broad selection for your requirements and wishes
- A professional level of **credentials and insurance**
- Complete support from the **ongoing service** perspective
- **Information on the latest technology**- and how to use it
- **A simple but custom solution** you will be proud to have as part of your home and lifestyle

Ethics. Continuing education. Insurance. Experience.
That's how CEDIA can give you peace of mind

**FIND A CEDIA
PROFESSIONAL
NEAR YOU**

Begin your search for your nearest qualified home technology professional with CEDIA's free online service. www.cedia.org/find-a-edia-professional

Even with the expert home technology pro in your corner, it can be helpful to have a top-level understanding of how your home technology project will flow. In order to help you better "speak the language" visit www.cedia.org for top tips and information.

Established in 2006, the prestigious CEDIA Awards celebrate excellence in home technology design, installation and integration across Region 1 (the UK, Europe, Africa, the CIS, the Middle East, India and Pakistan).

Setting the standard for CEDIA Home Technology Professional members across CEDIA Region 1, these stunning projects are the crème de la crème of smart home installations.

This year's scheme saw over 150 submissions from more than 16 countries, all competing for the top prizes in 2014. The battle to win a prestigious CEDIA Awards accolade has never been tougher.

Each installation category is judged by an expert panel drawn from the worlds of architecture, interiors, property, IT, smart home journalism and, of course, custom installation to ensure the highest standards of scrutiny for each and every entry.

A first round of technical judging is complemented by a final rigorous assessment to determine the category winners. As well as the need to be integrated and beautifully concealed with the interior, important factors also considered include compliance with industry best practice, the imaginative and appropriate design and use of technology, impeccably designed and installed racks, value for money as well as that all important 'wow' factor.

Throughout the judging process, the identity of member companies taking part in the CEDIA Awards scheme remains completely anonymous to preserve the integrity of the adjudication process.

The CEDIA Awards are open only to CEDIA member companies. More information about the Awards can be found on our dedicated website www.cediaawards.org

PLATINUM SPONSOR

GOLD SPONSOR

SILVER SPONSORS

kaleidescape

AFTER PARTY SPONSORS

Hannah Bouckley

Hannah Bouckley is the Tech & Gadgets editor on BT.com. She has been a

consumer technology journalist for over 10 years, working on both print and online publications, including T3, What Digital Camera and Recombu.

Jeff Gardner

Jeff Gardner serves as Director of Certification and Workforce Development

for CEDIA in America. His professional experience includes many years of system design; from pro audio and recording studios, to home theatres and integrated systems. He put this diverse background to use by creating and teaching CEDIA courses for many years as Director of Technical Training, before moving to certification in 2013. He holds industry related credentials from CEDIA, InfoComm, CompTIA, ISF, and HAA.

Michael Holmes

One of the country's leading property experts, Michael Holmes is the presenter

of Channel 5's I Own Britain's Best Home and previously presented ITV's Don't Move Improve and Build, Buy or Restore, for Discovery Realtime. Michael is also Editor-in-Chief of Homebuilding & Renovating Magazine, Move or Improve and Period Living. An experienced self-builder and renovator, Michael has recently completed his nineteenth project.

Simon Lucas

Simon Lucas is the Editor of What Hi-Fi? Sound and Vision Magazine and has

over ten years of journalism experience. Having worked on the magazine since 2004, he stepped up to the editor role over a year ago. Simon is a consumer electronics enthusiast and has an ability for understanding the products in great technical detail. This is shown through the technical articles and product reviews which feature in the monthly publication.

Duncan Maidens

Duncan Maidens has worked in the networking field for the past 20 years both as a

practitioner and educator. Starting life as a BBC engineer and then a period in the Royal Navy, Duncan progressed through several positions and now heads a team on Networking Specialists at Birmingham City University. The sideways move into Home Technology started 10 years ago, by providing training in home cabling solutions and the links to CEDIA were formed.

Steve May

Steve May is the Editor of Inside CI, an online trade publication dedicated to

custom installation, electronic system design and related technologies. He also freelances for a number of UK websites and publications, including Home Cinema Choice, T3, Tech Radar and Wired. Steve also contributes to Inside ID, a trade publication for interior designers and provides branded content and white label social media services for technology and entertainment companies.

Debra McQuin

Debra is the owner and principal designer of the London-based interior design practice, Mc-

Quin Partnership. Debra studied at KLC School of Design and became a Member of the British Institute of Interior Design (BIID) in 2010. She has been the BIID's Marketing Director for the past two years. Prior to re-training as an interior designer, Debra spent nearly 20 years in the advertising industry. She lived and worked on three continents and was a senior-level executive, consulting for global clients such as Mars, Gillette and Kraft. Debra received a BA magna cum laude from the University of Pennsylvania in Philadelphia, USA.

Geoff Meads

A twenty-five year veteran of the AV business, Geoff runs Presto AV, a web design

agency that specialise in the consumer technology market. He's Lead Instructor for CEDIA Region 1 and has taught literally hundreds of AV professionals in numerous subjects across five continents. He lives in Cambridgeshire, UK with his wife, children and a growing guitar collection.

Gregory Phillips

Gregory Phillips trained at Bristol University and the Mackintosh School of Architecture.

In 1991 he established his award winning practice, Gregory Phillips Architects. By considering the clients' lifestyle, the architecture, interiors and landscape design, Gregory offers a unique holistic approach to high quality residential design. Attention to detail and the use of both new and traditional materials in a contemporary way with a high degree of craftsmanship contributes to a portfolio of modern and elegant homes tailored to the lifestyles and aspirations of each of his clients.

Tad Trylski

Tad Trylski is a lighting designer with over 20 years experience working in both theatre and

architecture. A consultant and educator, he serves on industry committees for the IALD (International Association of Lighting Designers) and the SLL (Society of Light and Lighting). Tad has a particular interest in the control of lighting and is currently engaged on a number of hotel and hospitality projects. His varied work has taken him from Blue Chips to Cruise Ships and from the Clifton Suspension Bridge to the Pyramids of Giza. Tad has worked with CEDIA to develop the new lighting design categories in the awards.

- Two HD send/receive Baluns for Blu-ray & HD console*

- Yamaha RXA 2020 AVR amplifier*

- Yamaha BD-S673 3D Blu-ray player*

// PROJECT
Kinsella Gardens

// INSTALLER
Cornflake

The judges considered this as one of the 'best projects' due to its creative solution to a set of unique challenges.

The client's brief was to create a stunning media room within a minimalistic glass-box. With two floor-to-ceiling glass walls and a third wall providing access to the large glass humidor, the room layout provided little camouflage for hiding audio-visual kit.

To overcome these problems, Cornflake mounted a Samsung 55" ES8000 TV on an electric motor, capable of swivelling to face the viewer wherever they are seated. The issue of eliminating screen glare and darkening the bright sunny room was addressed by installing a dual-action blinds and lighting circuit. The Lutron-controlled system is pre-set with four different scenes to cover various daytime

and evening viewing options.

Sound is provided by a sleek and design-fitting small Leon Custom LCR soundbar speaker with a pair of B&W CCM684 speakers neatly and subtly plastered out of sight in the ceiling. The sub channel is provided by a B&W PV1D subwoofer.

Finally, as the only solid wall which could be used to hang a TV on was filled by bookcases and a door frame, Cornflake commissioned an innovative solution; a bespoke extending electric TV bracket. Fitted above the door it ensures that the plant room door - hidden behind a mock bookcase - can be used totally unimpeded.

FINALIST

// PROJECT
Vaulted Media Room

// INSTALLER
BrownHen Solutions

BrownHen Solutions transformed an underground vault into a multi-purpose media room where audio and video can be enjoyed by

the whole family. The solution had to be able to make use of the client's existing AV equipment, integrate with the multi-room audio system which was installed in the house and allow for a level of future-proofing.

The installer designed, built and installed handcrafted bespoke cabinets to accommodate the AV equipment and provide storage. By using an iterative 3D visualisation process, the client was able to interact and visualise designs. Three in-wall Speakercraft speakers, a subwoofer and media streaming end point were installed and commissioned to complete the project.

BEST MEDIA ROOM UNDER £15,000 (€18,000)

// PROJECT
ÜberHaus Club Room

// INSTALLER
Grahams Hi-Fi

This media room, which is located in the basement floor of a luxury Ski Chalet in Austria, is part of a whole integrated home and includes a large screen TV

with full surround sound, access to multi-channel TV for international guests, access to the central system sources which includes Kaleidescape, Sky receivers and security camera monitoring.

With guests regularly visiting the chalet, the owner requested that all equipment needed to be hidden. A joinery unit was designed to house the rack and other technical equipment. High quality speakers, which integrate with the whole house music system, subwoofer and Panasonic plasma TV were installed neatly within the joinery. Remote power management using ISOL-8 power distribution was used for the AV rack as ventilation is important in this basement project.

// PROJECT
Marlow Bottom

// INSTALLER
Living

The new media room can be transformed from a quiet reading room to a music venue to the ultimate cinematic escape - all at the touch of a button.

The client wanted the biggest projector screen size possible. This led to Living installing a 106" acoustic transparent screen, sat back in a recess to hide the in-wall centre and subwoofer, leaving the front wall looking as clean as possible. The installers pre-set scenes through RTI control. When the client selects the movie scene, the projector warms up, black out blinds close, the lights dim down to a low level and the amps switch on to the correct input.

WINNER

BEST MEDIA ROOM OVER £15,000 (€18,000)

// PROJECT
**Wimbledon
 Media Room**

// INSTALLER
**Philharmonic
 Audio Visual**

The judges complemented Philharmonic AV for following the client's brief superbly, adding 'I simply love this room'.

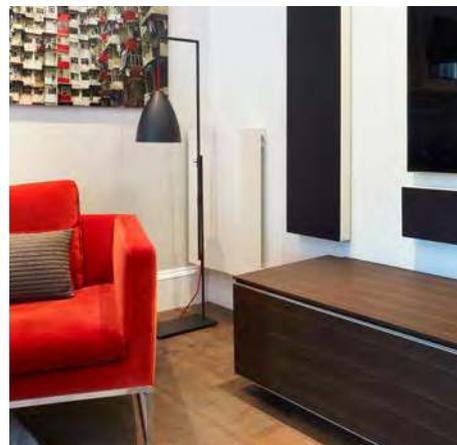

Philharmonic Audio Visual was enlisted to install a 21st century whole home AV system into this Victorian property. A key element of the project was transforming the former dining space into a media room where excellent audio and visual performance was instrumental.

To achieve both high performance sound and low visual impact, Philharmonic Audio Visual proposed Artcoustic speakers. The 5.1 surround system was complemented by an Artcoustic bespoke C-2 SL centre speaker to match the width of the TV, two Modular SL speakers and a Panel Sub SL Duo.

An Arcam AVR600 receiver was specified to power the speakers as its two-stage amplifier circuitry was the perfect partner for the high

sensitivity of the Artcoustic speakers. This combination means that, even when running at reference level, the amplifier is operating in its high quality Class A stage, ensuring that the average heat dissipation is low. This was key for this project as the AVR was located within the cabinetry with limited cooling options.

To ensure the video performance was of an equally high quality, an 8000 series 65" Samsung TV was installed. The slim, crisp lines of the bezel were a great match to the sharp edges of the Artcoustic speakers, and Philharmonic Audio Visual's millimetre-perfect installation precisely aligned the top of the screen and the speakers – no mean feat in a period property where the walls often present a challenge.

KIT LIST

- Arcam AVR600 receiver
- Artcoustic C-2 SL bespoke speaker
- Artcoustic 120-36 SL speakers
- Artcoustic Modular SL speakers
- Artcoustic Panel Sub SL Duo
- Artcoustic PA-260 amplifier

HIGHLY COMMENDED

// PROJECT

The Dark Side

// INSTALLER

Bespoke Home Cinemas

Starting this project at the build stage, Bespoke Home Cinemas worked with the air conditioning company to ensure a whole house ducted HVAC system was installed.

The home cinema is controlled remotely via the Rako 'light switches' which fire up the projector, close the curtains, dim the lights and turn on the TV. An alarm sensor was incorporated into the Control4 system via an Extra Vegetables driver to allow occupancy sensing, thus the room would automatically shut down if it was left unattended for a period of time.

A halo box was built to incorporate the projector, surround speakers, downlights and RGB LED up-lighting. This allowed the technology to be hidden out of sight, not disrupting the interior design.

BEST MEDIA ROOM OVER £15,000 (€18,000)

// PROJECT

Piece of the Action

// INSTALLER

Bespoke Home Cinemas

Bespoke Home Cinemas was given the task of designing and installing a media room into a pre-configured cinema room without

undertaking any building work, plastering or disruption to the décor. The biggest challenge was that no cables had been installed. The installers removed light fittings and used an imported US tool, MagNePull, to pull cables through the void, using high powered magnets and rollers.

Following the brief, Bespoke Home Cinemas installed a 3m width 16:9 acoustic screen. To accommodate the speakers behind the screen, a stud wall was built over the existing storage cabinetry. Resin anchor studs were fitted directly to the concrete cast ceiling to enable a Future Automation micrometre bracket to be fitted.

WINNER

BEST HOME CINEMA UNDER £40,000 (€48,000)

A contemporary cinema room which delivers a fantastic cinematic experience

// PROJECT
Playroom to Cinema

// INSTALLER
ET Home Cinema

ET Home Cinema has transformed a relatively small games room into a stunning home cinema which delivers from all angles. The size of the room was challenging when trying to create the perfect surround sound experience. Monitor Audio CFX speakers were configured in Dipole mode and installed at the back of the room to create an enveloping surround experience. A Velodyne SPL-800 subwoofer delivers the required base for the cubic area of the room.

The installers incorporated a bulkhead structure and rack area at the entrance of the room. This is not only aesthetically pleasing, but also functional as a bulkhead houses the projector,

CFX ceiling speakers and LED downlights. By curving the bulkhead from each side wall it created the illusion of the room being wider than it is. The curves complement the wall panels and ceiling centre panel and with just the projector lens visible, the room has a real cinema feel.

The Control4 lighting system was designed to integrate with various interfaces such as the iPad, in-wall 6 button keypads and Control4 dedicated SR250 remote control. In addition, a conventional 3-way light switch, located at the entrance, is programmed to the customer's exact requirements.

KIT LIST

- Bespoke wall and ceiling panels*
- Control4 6-way Zigbee keypad*
- Control4 8-way Contact I/O*
- Control4 iPad app*
- Control4 processor*
- Control4 SR250 remote control*

WINNER

BEST HOME CINEMA £40,000 - £100,000 (€48,000 - €120,000)

A stunning subterranean home cinema with flair and innovation

// PROJECT
What Lies Beneath

// INSTALLER
Finite Solutions

Finite Solutions faced a tough brief; to create a unique and truly immersive big screen experience in the basement. A key requirement was that the cinema screen needed to be as big as possible for the ultimate ‘wow’ factor. Image quality was hugely important as the system would be used by the family for watching movies, quality TV series and sporting events.

The installer opted for a subtle electric drop down screen to allow access to the front wall storage. A high quality 3.3m wide tab tension model from Screen Research’s ‘Supreme 2’ range was chosen. The JVC DLA-X95 projector was specified to complete the display product mix; together these products deliver fabulous image quality and 3D capability. The front three speakers, subwoofer and a Middle Atlantic ‘Pull Twist’ style rack were built into the front

wall joinery. These are subtly disguised behind speaker fabric and give the front wall a unique look when the screen is raised. The screen is also acoustically transparent as it covers the speakers when it is dropped.

To ensure the system was simple to use, Finite Solutions added a URC universal touchscreen to control all aspects of the system.

Careful consideration was given to the lighting design. Star capsule lamp fittings were dotted across the ceiling to create an interesting lighting effect. The light circuits and the skylight blackout blinds, are controlled from two Lutron Grafik Eyes allowing several pre-programmed lighting scenes to be easily accessed and adjusted from the cinema remote or the wall keypad.

KIT LIST

// INSTALLER
Artinstall

Artinstall designed and built a private home cinema for three viewers. The brief was for the room to have a minimalistic style

that matched the rest of the property. The room includes HD and 3D video which is projected from a JVC DLA-X55 3D projector onto a Stewart Luxus Deluxe screen wall.

With the client wanting just one easy to use remote, the system is controlled via the iPad with an intuitive and stylish interface.

Artinstall performed a full professional sound calibration, using unique smart system equalisation JBL Synthesis, so that the sound quality is at the same level for all three viewers. All AV equipment is housed under the screen in three professional Middle Atlantic racks.

House Craighall

// INSTALLER
BNC Technology

With the client expecting a balance between value for money, performance and a professionally installed system, BNC Technology

had a tough job on their hands.

As the client required a solution for movies, music and gaming, BNC Technology specified Jamo D600 speakers, Parasound power amplifiers and Integra processing for reliable IP control and quality processing.

The JVC projector and the Anamorphic lens gave the client a phenomenal picture with no rainbow effect. An acoustic transparent wall was built in front of the room to hide the subwoofers, speakers, cabling and acoustic treatment. The same was done for the rear speakers and surround speakers.

// PROJECT
**Sensational Hi-Tech
 Surrey Home**

// INSTALLER
Smartcomm

An audio system that will “knock your socks off”

The owner of a lavish family home in Surrey required Smartcomm to design and install a state-of-the-art home cinema that would provide ‘an out of this world experience’. With the aim of being the main attraction for family, friends and guests, the design had to incorporate enough seating to host at least 18 people, and to provide each person the most luxurious cinema experience, no matter where they sat in the room.

The solution encompasses an array of hi-tech gadgetry all brought together effortlessly via an ingenious Crestron control system. It forms a fully integrated automation solution

that is an absolute power-house behind the scenes, and yet simple and family-friendly at the front end.

An ImageArtMasque motorised 4-way cinema screen takes pride of place. The four metre frame is complete with a linear-glide masking system and precision motors to ensure greater accuracy for masking positions. To complement the screen a Digital Projection 1080p-REF was also installed. The world’s first 3-Chip LED digital projector delivers 20,000 Lumens output making this projector the perfect choice.

HIGHLY COMMENDED

// PROJECT
Tanglewood

// INSTALLER
T&T Automation

T&T Automation delivered a real 'wow factor' with this luxury home cinema and family entertainment space.

The installer created two multi-use rooms; one incorporating a bar and social space connecting the two areas together. A baffle wall houses the front array of speakers for both the games area and theatre space isolating them from the main house. There are two discrete surround sound systems; the first one is based around a stunning, large curved projection screen and 3D projector, the other is set around a 65" plasma screen.

The client is able to seamlessly control all the features of the room including subtle lighting scenes, shading controls, HVAC and of course the stunning entertainment solution, from both a handheld remote and an iPad. Both zones operate independently and can be used at the same time, for simplicity and convenience.

BEST INTEGRATED HOME UNDER £100,000 (€120,000)

// PROJECT
The BREEAM Home

// INSTALLER
James & Giles

A solution which integrates everything - tech, architecture and great interior design

The concealment of the technology was extremely important in this open plan house. The James & Giles solution made use of a 'chimney' running through the core of the home which provided the ideal location for the service run of cabling and HVAC components, as well as providing handy storage space for the family. In the main living space this central core houses a discretely positioned flat screen TV, and behind a detachable acrylic panel, a Leon soundbar, which blends with the panels

when not in use. The screen is future-proofed, in that upcoming Panasonic models are guaranteed to fit the current frame size if the family opt to upgrade.

The downstairs family media room features a projector, facing the discrete white wall 'screen', and accesses Blu-ray, Sky and various networked audio sources. The room is also used for entertaining, parties and live music, with its integral bar area, drum kit and piano.

The client can operate all the sub-systems in the house from Control4 touchscreens or the iPad. Meanwhile, a discrete plant room is home to the technology hub which stores equipment alongside the KNX/Control4 managed HVAC system.

KIT LIST

- Axis 4 Channel IP CCTV encoder
- Control4 remotes, touchscreens & amplifier
- Denon TU1800 DAB radio

Grahams Hi-Fi

A new build luxury ski chalet in Austria

The property, which would be available for rentals, needed to be of very high standard, fully automated and easy to use. It required all the latest technology and entertainment, robust and reliable internet, network and entertainment throughout. Because of the clientele, support and monitoring for the technology was vital.

Grahams Hi-Fi provided its usual, proven and reliable solution for whole house which centred around a properly designed and engineered data network. This has become so crucial for all the home systems that it is now often the “starting point” for project design. The

installer used Lutron HomeWorks throughout for lighting control, with over 150 channels of LED lighting, 95% of which was dimmable 0-10v controlled.

The house contains nine TV sets, a dedicated cinema room and two additional media rooms. It was vital that all of the systems work in the same way as the chalet would be occupied by different guests each week.

The control system was based on Control4 which was integrated with Sonos for the 16 zones of music. Sonos was specified as it was considered that many of the people renting the property may already have these in their homes and have the apps on their tablets and mobile phones. Sonos also integrates well with Control4 and Lutron so Grahams Hi-Fi was able to do some very powerful things in the background to make the system easier to use.

KIT LIST

- Bespoke custom door entry panels fitted with access keypads*

- Cisco*

- Control4*

- Custom power supply and distribution enclosure*

- Fixed day/night IR cameras*

- Lutron DS-60W power supplies*

- Lutron HomeWorks QS*

- Lutron keypads*

- Lutron QS processor*

- Panasonic IP PTZ HD cameras*

- Panasonic 500 series IP phone system*

- Phase dimming modules and 0-10v dimming modules*

- Ruckus wireless network*

- Sonos*

- Switched modules*

- Wirepath 4 channel DVR*

Lifestyle Technologies

The system installed in this project allows the client to easily monitor and control all the activity in the house, and enjoy entertainment throughout the property.

With energy saving being a key requirement, Lifestyle Technologies provided a totally integrated solution for intelligently controlling the lighting, shading and pool RGB colour changing effects through a Crestron DIN-rail lighting control system. Electrically operated windows provided true feedback to the system and engaged the roller blinds control according to the state of openness of the window.

Irrigation control and hot water boiling was achieved with weekly time scheduling through the touch panels and iPads.

Edicom

By including an automation system into this property, Edicom created a healthier and more comfortable

environment for the owners.

A whole home lighting control system works inside and out, integrating sophisticated functions such as dimming, lighting scenes, motion detection and light level sensors. A security system, which incorporates intruder alarm, video surveillance, door phone and access control ensures the property is secure at all times.
